POLICY FOR COMPLIANCE REGARDING SELECT AGENTS AND PATHOGENS

Policy Statement

Any activity involving Select Agents or Pathogens requires prior review and approval by the Institutional Biosafety Committee (IBC). Activity involving Select Agents (other than exempt quantities of listed Toxins) also requires express written permission from the Associate Vice President for Research. All IBC-approved activities involving Select Agents or Pathogens must be conducted in accordance with this policy. Failure to comply with this policy may result in disciplinary action up to and including termination.

Reason for Policy/Purpose

Pathogens pose a health threat to workers and the community and must be handled in accordance with sound biosafety practices. Some Pathogens and Toxins called Select Agents are deemed by the federal government to pose an extremely high risk to human, animal or plant health and could be utilized for terrorist activity. Accordingly, federal laws place restrictions on persons who possess, order, receive, have access to, or dispose of Select Agents, and impose severe criminal penalties for possession that cannot be justified for specified peaceful purposes. This policy sets forth the approval and usage guidelines for activities involving Pathogens and Select Agents.

Policy/Procedures

I. Prior Approval

Anyone proposing to engage in activity involving an Agent or Toxin must first check the Select Agent/Toxin List and the Centers for Disease Control (CDC) / National Institutes of Health (NIH) publication Biosafety in Microbiological and Biomedical Laboratories to determine if the Agent or Toxin is a Select Agent or Pathogen.

Prior to obtaining Pathogens or Select Agents, storage and use must be reviewed and approved by the Institutional Biosafety Committee (IBC) and Office of the Vice President for Research (OVPR). To obtain a review, complete and submit to the Biosafety Officer within the Office of Laboratory Safety (OLS) the IBC registration form along with an abstract or summary of the proposed research and a written protocol detailing the specific steps for material handling in the lab or animal facility. The protocol must address all hazards posed by the Select Agents or Pathogens to be used.

If the proposed work will include Select Agents there are additional requirements that will need to be met before approval will be granted. Requirements for approval include: registration, background checks, and written protocols that address biosafety and containment, security and incident response. Because of the many governmental requirements involved, the review process must be instituted well in advance of the proposed activity. Contact the Biosafety Officer within OLS at (202) 994-2630 to initiate the review process. Proposed use of materials deemed to be exempt under the regulations due to low quantities still must be reviewed and approved by the IBC prior to engaging in the activity to confirm safety measures are in place and that the use is truly exempt. Note also that any Select Agent discovered in any patient or other specimen must be reported to OLS immediately (call the alternate number on the recording if no one answers).

As Select Agents pose a risk under Occupational Health and Safety Administration (OSHA) regulations, Risk Management must be made aware of the use and storage of Select Agents on campus. Once the IBC and the Associate Vice President for Research have approved the protocol involving use of Select Agents, OLS will notify Health & Safety of the intended use.
II. Usage

Those working with Pathogens or Select Agents first must complete biosafety training, and must read and comply with the university’s Biosafety Manual. Workers also must comply with all written protocols required by the IBC, all government regulations, and must cooperate in periodic reviews by the IBC. The IBC can at any time make changes to the requirements for the material.

If the activity also will involve recombinant DNA, review and approval is required in accordance with the Policy Regarding Use of Recombinant DNA (rDNA).

III. Storage, Disposal and Transfer

Storage and disposal of Pathogens must comply with the Biosafety Manual and the conditions of the IBC approval. All storage, disposal or transfer of select agents must comply with federal law and the conditions of its registration. In the event of transfer of Pathogens or Select Agents off campus, contact the Biosafety Officer for requirements on transfer and shipping. If the transfer will be to another country or to a foreign national, review the university’s Export Control Policy and contact OVPR before transfer.

Further information and guidelines regarding Select Agents and Pathogens, and regarding IBC guidance and forms, is available on the OLS website.

## Definitions

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Agents</strong></td>
<td>Substance, whether biological or chemical, capable of producing an effect or reaction in living matter. An agent that is “infectious” is one that has the potential to produce disease.</td>
</tr>
<tr>
<td><strong>Pathogens</strong></td>
<td>Those infectious Agents identified by the CDC or NIH as having a biosafety level (BSL) of 2 or higher due to their ability to cause disease in healthy human adults.</td>
</tr>
<tr>
<td><strong>Select Agents</strong></td>
<td>Pathogens (including genetically altered forms) or Toxins deemed by the CDC or U.S. Department of Agriculture to pose a high risk to human, animal or plant health and could be utilized for terrorist activity. Also included are nucleic acids from these agents that could produce an infectious form or code for a toxin. The lists are incorporated in 42 CFR §73, 7 CFR §331 and 9 CFR §121 but a complete list can be found at <a href="#">here</a>.</td>
</tr>
<tr>
<td><strong>Toxins</strong></td>
<td>Poisonous compounds produced by certain microorganisms, plants or animals that produce disease.</td>
</tr>
</tbody>
</table>
